

Nam Woo-hyun

Frontend · Full-stack Developer

skadngus14@naver.com <https://github.com/weekend365> Incheon, South Korea

Summary

I am a frontend and full-stack developer with three years of experience building web services and management systems, primarily with React and Next.js.

My experience includes production and delivery-focused applications such as a GIS facility lookup system, a subscription service platform, and a Bus Information Management System (BIMS).

I aim to understand service architecture and data flow while considering frontend-backend integration, maintainability, and user experience together.

Experience

C&Net

Dec 2025 – Present

Associate · Full-stack Developer

- Built frontend screens for KDS/KCS standard documents, review items, object classifications, and variables.
- Implemented complex business interfaces with TypeScript, Mantine UI, tables, trees, modals, tabs, and resizable panels.
- Managed CRUD server state with TanStack Query and synchronized screen data after save, delete, and validation operations.
- Built variable tables and dialogs for input, output, and managed variables, parent links, and selectable values.
- Implemented a four-pane variable mapping tool connecting classifications, review items, review elements, and a detail editor.
- Developed tab-based detail editing for base information, content, managed variables, rules, and I/O variables.
- Designed and implemented tree navigation, search, selection state, and child-node create, update, and delete flows.
- Wrote Jest and React Testing Library tests for variable tables, dialogs, mapping tools, and resizable panels.
- Maintained the Next.js frontend for Docker standalone builds and Jenkins deployment.
- Built BIMS administration screens for bus, route, and operational data.
- Mapped Spring Boot API request and response contracts into frontend data flows.

Associate · Full-stack Developer

- Developed the React and Next.js frontend for a subscription service.
- Structured pages with the Next.js App Router and improved SSR and SEO.
- Built core screens for authentication, subscription information, products, and services.
- Implemented NestJS backend APIs and business logic.
- Contributed to PostgreSQL data modeling and service table design.
- Improved API integration and frontend data-processing flows.
- Implemented the UI with Tailwind CSS and improved the user experience.
- Worked with Docker and Git-based development and collaboration workflows.

KMIS Co., Ltd.

May 2023 – Jan 2025 · 1 year 9 months

Associate · Frontend Developer

- Developed a GIS web application with React, Next.js, and TypeScript.
- Built map-based facility lookup and detail interfaces.
- Implemented location queries, map markers, popups, and detail-panel interactions.
- Created responsive and administrative interfaces with Tailwind CSS.
- Transformed and rendered API response data for the interface structure.
- Worked through Git-based collaboration and feature-oriented development.
- Contributed to a production system delivered to Korea Water Resources Corporation.

Jango

2026 · Preparing for store submission

Product · Mobile · Backend · Admin · Infrastructure

An ingredient and household inventory service that tracks expiry dates and recommends AI-generated recipes prioritizing items that expire soon.

React Native Expo TypeScript NestJS Next.js
PostgreSQL Prisma

KCSC Digital Construction Standards System

Dec 2025 – Present

Frontend Development & Enhancement

A business system for navigating and editing public construction standards, review items, object classifications, and variables.

Next.js TypeScript Mantine TanStack Query
Jest React Testing Library Docker

BIMS Bus Information Management System

Dec 2025 – Present

Full-stack Development

A web application for administrators to reliably view, update, and manage bus, route, and operational data.

React Next.js TypeScript Spring Boot
PostgreSQL Tailwind CSS Mantine

Subscription Web & App Platform

May 2025 – Dec 2025

Full-stack Development

An in-house subscription platform covering authentication, subscriptions, products, and service information.

React Next.js TypeScript NestJS Node.js
PostgreSQL Tailwind CSS

GIS Facility Lookup System

May 2023 – Jan 2025

Frontend Development

A delivered public-sector web application for exploring facilities and location data on a map.

React Next.js TypeScript Tailwind CSS
PostgreSQL HTML5 CSS3

Education & Training

Korea National Open University

Class 1 Driver's License
Apr 2018 · Passed · Korean National Police Agency

Professional Interests

- Connecting frontend and backend through a clear understanding of service architecture and data flow
- Development that balances user experience, service reliability, and maintainability
- Using AI development tools for code analysis, refactoring, documentation, and productivity
